

In recent years, foreign holdings of U.S. securities have grown markedly. During 2005, reported foreign holdings increased nearly \$1 trillion for the second consecutive year, bringing the estimated total to about \$7.3 trillion, or roughly 16 percent of all U.S. longterm securities outstanding at year-end. These large numbers are understandably attracting a great deal of attention, as external deficits are a subject of growing concern in today's global economy. In this article, we present current data on U.S. cross-border securities holdings and transactions and describe the system that collects the data. We discuss how to make the best use of the information available by avoiding common misinterpretations of the data and by adjusting the published figures to improve their accuracy and comprehensiveness. We also discuss how to construct monthly estimates of crossborder securities holdings by country, combining monthly transactions data with less frequently reported positions data. Besides providing more timely measures of holdings of securities, these estimates incorporate a number of adjustments that improve our overall picture of cross-border portfolio positions. Finally, to improve our ability to correctly attribute U.S. liabilities to foreign holders, we compare our estimates of foreign holdings of U.S. securities with estimates obtained from asset surveys conducted by other countries.
